A molecular catalyst developed by Pavel Dub of Chemistry Division at LANL was featured in a cover image of the latest issue of Nature Reviews Chemistry (2018, volume 2, issue 12). The Ir catalyst lacks an N-H functionality and was developed following reconsideration of the mechanism of the Noyori reaction.

This paper reports the first example of dearomatization of ubiquitous terpyridine (tpy) ligands via 27/67-, 37/57-, or 47-selective alkylation of the central pyridine ring. The reaction is mediated by the most abundant metal in the Earth's crust, aluminum (Al), and depending on the conditions employed, exhibits ionic or radical character as suggested by experimental and ...

Catalysis is the second largest application for V after its use as an additive to improve steel production. Molecular complexes of vanadium(V) are particularly useful and efficient catalysts for oxidation processes; however, their ability to catalyze reductive transformations has yet to be fully explored. Here we report the first examples of polar organic functionality reduction mediated by V ...
