Pond Life Identification Sheet. Once
Upon a Pond Lab. You will be
receiving a drop of pond water on a
slide. In a single drop of water there
can be hundreds of microscopic
creatures. Most of those creatures
belong to Kingdom Protista because
they are eukaryotes, unicellular (most
of them) and move using tails, hairs, or
fake feet.

Aquatic insects are highly beneficial to ponds, with their presence within a pond being a good indicator of ecosystem health. Aquatic insects are an essential part of a balanced water ecosystem, and the ones that are present can tell you a great deal about your pond and how healthy or unhealthy it is.

These critters don't belong to the Kingdom Protista but rather the Kingdom Anamalia. Some, like the rotifers look like protists and even have cilia but they are made of many cells and have organs like other animals. Shown at the left is a very common pond water critter called a Rotifer. If you study pond water

Microbus Microscope ...*

Algae are autotrophic protists that can be found in pond water. Most of these microorganisms are green in color, while a few may be yellowish-brown. Algae are also diverse, and may either be unicellular or multicellular. Some of the most common forms of algae that may be found in pond water include spongomonas, euglena as well as chlamydomonas. While some of these microorganisms (chlamydomonas) swim freely in search of food, others (spongomonas) live in gelatinous matrices and use special ...
