population genetics lab answers kim foglia

The shifting balance theory of Sewall Wright held that the combination of population structure and genetic drift was important. Motoo Kimura 's neutral theory of molecular evolution claims that most genetic differences within and between populations are caused by the combination of neutral mutations and genetic drift.

Molecular population genetics aims to
explain genetic variation and
molecular evolution from population
genetics principles. The field was born
50 years ago with the first measures of
genetic variation in allozyme loci,
continued with the nucleotide
sequencing era, and is currently in the
era of population genomics.
