Power Electronics is the subject that deals with the study of electronic circuits and devices but at high voltage or high power (i.e. at power level). i.e. Power Electronics = Electronics applied at Power-level. Some Power Electronics devices are: SEMICONDUCTOR BASED POWER ELECTRONICS DEVICES: Power Diodes, Power MOSFET, Thyristors, IGBTs, GTOs etc. Power Electronics Devices

Introduction to Power Electronics and Its About Circuit

Generally, power electronic devices based on the AlGaN/GaN heterojunction structure have the following four advantages: (1) the 2DEG with high carrier density and high carrier mobility reduces the on-resistance of the device and hence the conductive loss of the power switch. (2) At the same output power, the device area is much smaller for GaN HEMT.
