Power System Commissioning And Maintenance

Power system reliability and security is highly dependent on the practices employed in both the commissioning and maintenance processes. Both must be to a high standard to ensure that equipment does not enter service with latent deficiencies. This demands engineers who understand the necessary management involved as well as the technical processes.

Power System Commissioning and Maintenance Practice ...

The commissioning of electrical power systems may, in the first instance, be thought of as a purely engineering activity, associated with understanding and proving the technical integrity of the equipment; it is, however, also a management process, requiring such qualities as: setting of objectives; planning; organising; documentation control; and, most important, the creation of teamwork.
