This book gives a  
treatment of exterior  
differential systems.  
It will include both  
the general theory  
and various  
applications. An  
exterior differential  
system is a system of  
equations on a

manifold defined by equating to zero a number of exterior differential forms.

When all the forms are linear, it is called a pfaffian system. Our object is to study its integral manifolds, i. e. , submanifolds satisfying all the equations of the system. A

fundamental fact is

that every equation implies the one obtained by exterior differentiation, so that the complete set of equations associated to an exterior differential system constitutes a differential ideal in the algebra of all smooth forms. Thus the theory is coordinate-free and

Certain coordinates remain independent. The corresponding notion in exterior differential systems is the independence condition: certain pfaffian forms remain linearly independent. Partial differential equations and exterior differential systems with an
