The designer of a computer system must ensure that an adversary cannot breach the security of the system in any way. Furthermore, the designer must make it difficult for an adversary to side-step the security mechanism; one of the simplest ways for an adversary to steal confidential information is to bribe someone on the inside.

Happy Friday, CS110 Family! I've published an Assignment 3 Redux right here. We'll be releasing Assignment 3 grades this coming weekened, but I figured the sooner you read an assign3 postmortem, the better Assignment 4 development will go.. Also, a former student of mine built this. It's an interview prep platform, but it focuses primarily on machine learning and artificial intelligence.
