evolutionary biology to prevent the loss of biological diversity, or to restore species and ecosystems. Population viability assessment is used to evaluate risks of extinction. Biogeographic theory is used to understand the problems of habitat fragmentation and reserve design. Ecosystem and landscape management will be explored. Methods of intensive

PRINCIPLES OF CONSERVATION BIOLOGY

Conservation biology and the concept of biological diversity (biodiversity) emerged together, helping crystallize the modern era of conservation science and policy. The inherent multidisciplinary basis for conservation biology has led to new subdisciplines including conservation social science, conservation behavior and conservation physiology. [10]

Conservation biology - Wikipedia

The conservation approach that preserves areas that are threatened but not biologically rich focuses on: representative habitats approach Choose the three factors that make small populations vulnerable to the loss of genetic diversity.

ecologists and conservation biologists. 1. Species diversity - number of species in a given area 2. Genetic diversity - number of different alleles • Relative frequencies of those alleles in a population is also significant. 3. Ecosystem diversity - interactions between species • Conserve species with critical roles to play in an ecosystem. 4.
