167, 157 389, 369]. Alternative LTL model-checking algorithms that do not use Büchi automa a, but a so-called tableau for the LTL formula, were presented by Lichtenstein and Pnueli [273] and Clarke, Grumberg, and Hamaguchi [88]. The results about the complexity of LTL model checking and the satisfiability problem are due to Sistla and Clarke ...

computer-based control systems is that of model checking. Model checking is a formal verification technique which allows for desired behavioral properties of a given system to be verified on the basis of a suitable model of the system through systematic inspection of all states of the model. The attractiveness of model checking comes from the fact that
