Repeatedly scans a geographical area and produces data from which the location, speed, and size of the objects detected can be inferred. Tracking can only be successfully performed when signal processing is capable of producing a reliable input stream of detected peaks.

A radar tracker is a component of a radar

Download Free Radar Detection

system, or an associated command and control system, that associates consecutive radar observations of the same target into tracks. It is particularly useful when the radar system is reporting data from several different targets or when it is necessary to combine the data
