## ~~Introduction to Quantitative PCR —Agilent~~

A real-time polymerase chain reaction, also known as quantitative Polymerase Chain Reaction, is a laboratory technique of molecular biology based on the polymerase chain reaction. It monitors the amplification of a targeted DNA molecule during the PCR, not at its end, as in conventional PCR. Real-time PCR can be used quantitatively and semi-quantitatively. Two common methods for the detection of PCR products in real-time PCR are non-specific fluorescent dyes that intercalate with any double-strand
