Sensor Module 3 Axis Accelerometer

The 3-axis accelerometer module carries an MMA7361 chip from Freescale. The MMA7361 operates in 2 selectable sensitivity modes, +/- 1.5g, and 6g. The sensor board defaults to 1.5g. Add the shunt or use the GS pin for software selection of 6g sensitivity. The 3-Axis Accelerometer sensor will operate between 2.2 and 6 volts.

3-Axis Accelerometer Module - Modern Device MPU-6050 chip - 3 Axis Gyroscope + 3 Axis Accelerometer Sensor Module Gyroscope range: ± 250 500 1000 2000 $^{\circ}$ / sec(dps) and provide the I2C serial interface. a separate VLOGIC reference pin Working voltage :3-5V (internal low dropout regulator) Chip built-in 16bit AD converter, 16-bit data output standard IIC communications protocol

The Makeblock Me 3-Axis Accelerometer and Gyro Sensor is a motion processing module that can use to measure the angular rate and the acceleration information of your robot. The Me 3-Axis Accelerometer and Gyro Sensor is based on MPU-6050 that combines a 3-axis gyroscope, 3-axis accelerometer, and a Digital Motion Processor™ (DMP) capable of ...

MPU6050 (Gyroscope + Accelerometer + Temperature) Sensor ...

An accelerometer is a tool that measures proper acceleration. Proper acceleration is the acceleration (the rate of change of velocity) of a body in its own instantaneous rest frame; this is different from coordinate acceleration, which is acceleration in a fixed coordinate system. For example, an accelerometer at rest on the surface of the Earth will measure an acceleration due to Earth's ...

Sensor module: 3-axis accelerometer and 3-axis magnetometer

Here is an introduction to MMA7361, which is a long-familiar 3-Axis Accelerometer Module! This sensor can measure static (earth gravity) or dynamic acceleration in all three axis. Application of the sensor is in various fields and many applications can be developed using it.

MMA7361 Tutorial 3-Axis Accelerometer Module
The ADXL335 Module 3-axis Analog Output Accelerometer measures acceleration with a minimum full-scale range of ± 3 g. It can measure the static acceleration of gravity in tilt-sensing applications, as well as dynamic acceleration resulting from motion, shock, or vibration.

ADXL335 Module 3-axis Analog Output Accelerometer

Description The MPU6050 contains both a 3-Axis Gyroscope and a 3-Axis accelerometer allowing measurements of both independently, but all based around the same axes, thus eliminating the problems of cross-axis errors when using separate devices.

LIS2HH12 module is based off the ST 3-Axis accelerometer. The module is a tiny package and allows for 2 5-pin headers to be soldered to it. This mitigates vibration noise that is introduced to the accelerometer. from external sources of varying frequencies. You can buy this chip from these locations:

3 Axis Accelerometer LIS2HH12 Module : 10 Steps (with ...

Accelerometer Sensor Module is a 3-axis acceleration sensor. It utilizes the Analog Device ADXL345 providing a high resolution measurement of up to +/- 16 g. The accelerometer measures the static acceleration of gravity in tilt-sensing applications, as well as dynamic acceleration resolution from motion or shock.

Accelerometer Sensor Module - Arduino Compatible Products

It integrates a 3-axis gyroscope, a 3-axis accelerator, and a digital motion processor (DMP) hardware acceleration engine that can be connected to other brands of accelerators, magnetic sensors, or other sensors via a second I2C port.
