book discusses the immunologic, clinical and epidemiologic evidence for altered responses during pregnancy. Several infections have unique consequences in pregnancy. Some infections have vertical transmission, and their management focuses on decreasing perinatal transmission. Others can be transmitted transplacentally and cause congenital infection. While still, other common infections like gastroenteritis, UTI, tuberculosis, leprosy or certain dermatological and oral conditions can cause pregnancy complications. This book discusses all such diseases in detail as well as suggests means for early identification and appropriate treatment for them. A separate chapter adequately covers the novel coronavirus infection associated with management challenges in pregnant women. The book includes dedicated
