Which types of validity evidence should be considered when determining whether a scale is appropriate for a given measurement situation? What about reliability evidence? Using clear explanations illustrated by examples from across the social and behavioral sciences, this engaging text prepares students to make effective decisions about the selection, administration, scoring, interpretation, and development of measurement instruments. Coverage includes the essential measurement topics of scale development, item writing and analysis, and reliability and validity, as well as more advanced topics such as exploratory and confirmatory factor analysis, item response theory, diagnostic

classification models, test bias and fairness, standard setting, and equating. End-of-chapter exercises (with answers) emphasize both computations and conceptual understanding to encourage readers to think critically about the material. ÿ

The 'Anthem Guide to Essay Writing' is a comprehensive guide to writing successful essays in any course, with step-by-step advice and plenty of examples. One of the greatest assets of this book is its insights into how essays are evaluated, so that writers can focus their efforts productively. It demonstrates each step of the writing process – from close reading and research to generating ideas, organizing thoughts, structuring a draft essay, and revising for clarity and eloquence. If you want to improve the quality of your essays, you will find clear, helpful advice in this easy-to-use guide.

Special edition of the Federal Register, containing a codification of documents of general applicability and future effect ... with ancillaries.

This book explains and demonstrates to students when to use and how to apply the quantitative and qualitative techniques that they?ll need to do their own social research. Using actual examples from psychology, sociology, anthropology, health and education, the book provides readers with both a conceptual understanding of each technique as well as showing them how to use the technique.

This book provides step-by-step instructions on how to analyze text generated from in-depth interviews and focus groups, relating predominantly to applied qualitative studies. The book covers all aspects of the qualitative data analysis process, employing a phenomenological approach which has a primary aim of describing the experiences and perceptions of research participants. Similar to Grounded Theory, the authors' approach is inductive, content-driven, and searches for themes within textual data.

With this second volume, we enter the intriguing world of complex analysis. From the first theorems on, the elegance and sweep of the results is evident. The starting point is the simple idea of extending a function initially given for real values of the argument to one that is defined when the argument is complex. From there, one proceeds to the main properties of holomorphic functions, whose proofs are generally short and quite illuminating: the Cauchy theorems, residues, analytic continuation, the argument principle. With this background, the reader is ready to learn a wealth of additional material connecting the subject with other areas of mathematics: the Fourier transform treated by contour integration, the zeta function and the prime number theorem, and an introduction to elliptic functions culminating in their application to combinatorics and number theory. Thoroughly developing a subject with many ramifications, while striking a careful balance between conceptual insights and the technical underpinnings of rigorous analysis, Complex Analysis will be welcomed by students of mathematics, physics, engineering and other sciences. The Princeton Lectures in Analysis represents a sustained effort to introduce the core areas of mathematical analysis while also illustrating the organic unity between them. Numerous examples and applications throughout its four planned volumes, of which Complex Analysis is the second, highlight the far-reaching consequences of certain ideas in analysis to other fields of mathematics and a variety of sciences. Stein and Shakarchi move from an introduction addressing Fourier series and integrals to in-

depth considerations of complex analysis; measure and integration theory, and Hilbert spaces; and, finally, further topics such as functional analysis, distributions and elements of probability theory.

This book is the scientific summary of the author's treatment experience on oncology surgery during his 50 years of oncology surgical practice and of the author's research achievement during his 20 years of animal cancer experimentation and clinical research. The book is divided into 38 chapters in which the author demonstrates innovative concepts of cancer therapy including a new cognition of cancer etiology and pathogenesis, new concepts and methods of cancer therapy and anti-cancer metastasis and recurrence. The author also demonstrates experimental information and analysis of clinically testified results and new ways of conquering the cancers from many aspects. The cancer existing in the human body has three forms: the two points and a line, and "eight steps" and "three stages" of carcinoma metastasis, the third field of anti-carcinoma-metastasis and recurrence treatment, three Steps of therapy of carcinoma metastasis, etc. It includes both the review and recall of traditional surgical and chemotherapy and radioactive therapy and the summary and analysis of the experimental information and clinical testifying results for XZ-C immunologic regulation and control anti-carcinoma traditional Chinese's medicine which the author purified from the Chinese herbs. In addition, in this book the author added the scientific methods of the cancer therapy and the strategies and suggests for the overcoming the cancer development. Some part contents of this book have generated great attention in the international field of oncology. In this book the contents are creative and the ideas are new and the theories are related to the practices. There are extremely high scientific value and clinical application, which is a value reference for clinical oncologist, oncology specialists and oncology scientific researcher and the family and caregivers of the cancer patients.

Summary of International Energy Research and Development Activities 1974–1976 is a directory of energy research and development projects conducted in various countries such as Canada, Italy, Germany, France, Sweden, and the United Kingdom between 1974 and 1976. A limited number of projects sponsored by international organizations such as the International Atomic Energy Agency are also included. This directory consists of nine chapters and opens with a section on organic sources of energy such as coal, oil and gas, peat, hydrocarbons, and non-fossil organic sources. The next sections focus on thermonuclear energy and plasma physics; fission sources and energy production; geophysical energy sources; conversion technology; and environmental aspects of energy conversion and use. Energy transport, transmission, utilization, and conservation are also covered. The final chapter deals with energy systems and other energy-related research on subjects ranging from car sharing and urban passenger transport to nuclear power plants, energy supply and demand models, and high-power molecular lasers. This monograph will be a valuable resource of information for those involved in energy research and development.
