Surgery Of The Foot
And Ankle Reference 8e

Most surgery can be performed as a day case and takes up to an hour. Your foot will be bandaged and

you'll need to wear a Velcro surgical shoe for four to six weeks afterwards. If your bunion has been caused by rheumatoid arthritis, you may also develop rheumatoid nodules. These firm, pea-sized lumps can occur at pressure points such as your big toe joints, the back of your heels or

on your toes, but they
can be surgically
removed.

Surgery. Surgery for
problems of the small
toes. The three main
problems that can

happen are deformity,
pain in the toe joints
and metatarsalgia.

Toe deformities such
as claw toe and
hammer toe happen
when the tendons that
move the toes get too
tight, or out of
balance. A bunion can
cause pressure and
pain.
