Surgery of the Mandible American Academy of Facial Plastic ...

For a mandibulectomy (or mandibular resection), the surgeon removes all or part of the jaw bone (mandible). This operation may be needed if the tumor has grown into the jaw bone. If a tumor near the jaw is hard to move when the doctor examines it, it often means that the cancer has grown into the jaw bone.

CG-SURG-84 Mandibular/Maxillary (Orthognathic) Surgery

Upper jaw surgery can correct an overbite, crossbite, and open bite in adults. Mandibular Osteotomy (Lower Jaw) Mandibular osteotomy surgery corrects a severely receded lower jaw. During the procedure, an oral surgeon moves the lower jawbone forward or backward, depending on the patient's bite alignment. Lower jaw surgery commonly treats underbites.

Jaw Implants: What to Expect, Pictures, Procedure, and More

Receding lower jaw; Protruding lower jaw; The surgeon makes cuts behind the molars and lengthwise down the jawbone so the front of the jaw can move as one unit. The jaw can then be moved to its new position either forward or backward. Plates and screws hold the jawbone together as it heals. Chin surgery (genioplasty)

Mandibular Fractures | American College of Veterinary ...

Mandibular reconstruction is mostly being performed using fibular osteocutaneous-free flaps. Although the curvature of the original mandible can be reconstructed using the conventional method, the 3D CAD-CAM technology can provide a more precise reconstruction modality that includes fibular osteotomy and fixation guides.

---

Mandible Reconstruction - an overview | ScienceDirect Topics

Surgical resection of the mandible required a modified apron incision from the mastoid process extending to a lip-split incision between the lower 2 central incisors. The marginal mandibular nerve and facial artery were identified and preserved. Several enlarged perifacial and external-jugular lymph nodes were removed and sent for pathology.
