Surgical Laparoscopy Endoscopy & Percutaneous Techniques  
Laparoscopy (from Ancient Greek *lapara*), meaning  
'flank, side', and *skopeo*), meaning 'to see') is an  
operation performed in the abdomen or pelvis using small incisions  
(usually 0.5 – 1.5 cm) with the aid of a camera. The laparoscope  
aids diagnosis or therapeutic interventions with a few small cuts in  
the abdomen.

## Laparoscopy - Wikipedia

During laparoscopy, the surgeon makes a small cut (incision) of  
around 1 to 1.5cm (0.4 to 0.6 inches), usually near your belly  
button. A tube is inserted through the incision, and carbon dioxide  
gas is pumped through the tube to inflate your tummy (abdomen).

## Laparoscopy (keyhole surgery) - How it's performed - NHS

Laparoscopy Published: 22/10/2015 This information is for you if  
you are about to have, or have had, a laparoscopy (keyhole surgery).  
It may also be helpful if you are a partner, relative or friend of  
someone who is in this situation.

## Laparoscopy recovering well leaflet

A diagnostic laparoscopy is usually performed under a general  
anaesthetic. The operation usually takes about fifteen minutes. Your  
gynaecologist will make several small cuts on your abdomen. They  
will place surgical instruments, along with a telescope, inside your
