The Unified Modeling Language (UML) is a general-purpose, developmental, modeling language in the field of software engineering that is intended to provide a standard way to visualize the design of a system.. The creation of UML was originally motivated by the desire to standardize the disparate notational systems and approaches to software design.

Unified Modeling Language - Wikipedia

UML, short for Unified Modeling Language, is a standardized modeling language consisting of an integrated set of diagrams, developed to help system and software developers for specifying, visualizing, constructing, and documenting the artifacts of software systems, as well as for business modeling and other non-software systems. The UML represents a collection of best engineering practices that have proven successful in the modeling of large and complex systems.

What is Unified Modeling Language (UML)?

With The Unified Modeling Language User Guide, readers will: understand what the UML is, what it is not, and why it is relevant to the development of software-intensive systems master the vocabulary, rules, and idioms of the UML in order to "speak" the language effectively learn how to apply the UML to a number of common modeling problems

The Unified Modeling Language User Guide by Grady Booch ...

The Unified Modeling Language (UML) was created to forge a common, semantically and syntactically rich visual modeling language for the architecture, design, and implementation of complex software systems both structurally and behaviorally. UML has applications beyond software development, such as process flow in manufacturing.

What is Unified Modeling Language | Lucidchart

Way back in the late twentieth century — 1997 to be exact — the Object Management Group (OMG) released the Unified Modeling Language (UML). One of the purposes of UML was to provide the development community with a stable and common design language that could be used to develop and build computer applications.

This paper presents a new UNified pre-trained Language Model (UNILM) that can be fine-tuned for both natural language understanding and generation tasks. The model is pre-trained using three types of language modeling tasks: unidirectional, bidirectional, and sequence-to-sequence prediction. The unified modeling is achieved by employing a shared Transformer network and utilizing specific self ...
