Time's Arrow and Archimedes' Point: New Directions for the ...

The main idea of Time's Arrow and Archimedes' Point is that our intuitive/subjective sense of time has a very great effect on how we think about time and the temporal aspects of reality. Namely, we should try to distinguish how the world actually is from how it seems to be from our particular standpoint.

The arrow of time, also called time's arrow, is the concept positing the "one-way direction" or "asymmetry" of time. It was developed in 1927 by the British astrophysicist Arthur Eddington, and is an unsolved general physics question. This direction, according to Eddington, could be determined by studying the organization of atoms, molecules, and bodies, and might be drawn upon a four-dimensional relativistic map of the world. Physical processes at the microscopic level are believed to be either

To overcome this natural tendency, we need to imagine a point outside time - an Archimedean viewpoint, as Price calls it - from which to think about the arrow of time in an unbiased way. Taking this Archimedean viewpoint, Price asks why we assume that the past affects the future but t vice versa, and argues that causation is much more symmetric in microphysics: to a limited extent, the future does affect the past.
