An excellent academic book on the theory behind performance tuning for 2-stroke motorcycles. Geared specifically for GP and Kart racers, this hardcover treasure has turned out to be a great reference source for questions on the logic and concepts that pertain to tuning a 2-stroke for maximum performance. This doesn't always mean maximum horsepower.

Two Stroke Performance Tuning a disc partially cut away and attached to the end of the crankshaft opens and closes an inlet port in the side of the crankcase. The Morbidelli 125 twin road racer is a rotary valve engine. The inlet port opens 30 ° after BDC and closes 79 ° after TDC. The piston crown opens and closes the exhaust and transfer ports.

Two Stroke Performance Tuning The square bridged port is fairly common in large displacement motocross and enduro engines (FIGURE 3.8). It has a very large port area, but then it has to have a large area as it flows only about 85% as well as an unbridged port of equivalent area. In past

In contrast, a two-stroke engine's valve timing may be altered simply by reshaping the holes in its cylinders, and its power output markedly changed by utilizing inertia and resonant effects in its intake and exhaust tracts. None of these modifications are costly. On the other hand, while the two-stroke engine does not commonly require large

Power Kits – Two Stroke Performance Engine Tuning

The way a two stroke motor works causes them to be fairly noisy and a bit inefficient. A tuned pipe has a set of cones- Divergent (meaning the cone gets bigger) and Convergent (meaning the cone gets smaller) that are built to cause "echoes" or pressure waves to reflect back, which if done properly can increase the power of the engine.
