Waves in Neural Media: From Single Neurons to Neural Fields surveys mathematical models of traveling waves in the brain, ranging from intracellular waves in single neurons to waves of activity in large-scale brain networks. The work provides a pedagogical account of analytical methods for finding traveling wave solutions of the variety of nonlinear differential equations that arise in such models.

Finally, wave propagation in stochastic neural fields is analyzed, and oscillatory waves in two-dimensional neural media are briefly discussed. View. Waves in the Developing and the Diseased Brain.
