Some symptoms may point to dementia if you have become significantly more forgetful to the extent that it is affecting your daily life. This is especially true if you: struggle to remember recent events, although you can easily recall things that happened in the past, find it hard to follow conversations or programmes on TV,

How can I tell if I have dementia? | Alzheimer's Society

Alzheimer's disease is most common in people over the age of 65. The risk of Alzheimer's disease and other types of dementia increases with age, affecting an estimated 1 in 14 people over the age of 65 and 1 in every 6 people over the age of 80. But around 1 in every 20 cases of Alzheimer's disease affects people aged 40 to 65.

Alzheimer's disease - NHS

The majority of people who develop the disease are over the age of 65. Sometimes, Alzheimer's can affect younger people. It is thought that around 5% of people with Alzheimer's are under 65, about 42,000 people. These rare cases of the disease are called early-onset Alzheimer's.

What is Alzheimer's disease? | Alzheimer's Research UK

What is Alzheimer's disease? Dementia is the name for a set of symptoms that includes memory loss and difficulties with thinking, problem-solving or language. Dementia develops when the brain is damaged by diseases, including Alzheimer's disease. Alzheimer's disease is a physical disease that affects the brain.

Alzheimer's disease | Alzheimer's Society

When your loved one is in this early phase, they won't have any symptoms that you can spot. Only a PET scan, an imaging test that shows how the brain is working, can reveal whether they have got...

Alzheimer's Disease: The 7 Stages of the Disease

In the early stages, the main symptom of Alzheimer's disease is memory lapses. For example, someone with early Alzheimer's disease may: forget about recent conversations or events; misplace items; forget the names of places and objects; have trouble thinking of the right word; ask questions repetitively
